To Pennsylvania PUC re: ACT 40 interpretation.

Dear PUC members,

As an individual who installed solar on my home in 2009 partly based on SREC prices of around \$300, I am deeply interested and concerned about the implementation of ACT 40. This legislation was clearly intended to **close the borders** to out-of-state renewable energy generators. There is no ambiguity in this document unless you work hard to find it there.

The State of Pennsylvania will fall further behind it's neighbour States if we don't take action to stimulate RE growth within our borders. We need movement on not just this issue but also the percent RE requirement in the portfolio (RPS) for our utilities. But, at least, let's start here, close the borders as most other States have done. And, then we can work on the RPS as the next step towards transitioning towards a true 21st century grid.

Thank you,
